Lâm Gia Kiệt | Game Developer Engineer

Ho Chi Minh / Phone: (+84) 886659957 / Email: lamgiakiet.2005@gmail.com

LinkedIn: linkedin.com/in/lam-kiet-b79560304/

EDUCATION

FPT University Ho Chi Minh 09/2023 – Present

Studying Software Engineering.
Good grade in major subjects: PRF192 (Fundamental Programming) - 8.8/10, CSI104 (Computer Science) - 9.0/10

TECHNICAL SKILLS

Game Development: Unity, Blender

Programming: Java (Core/OOP concepts), C#, SQL

Cloud & Infrastructure: AWS (CDK, Lambda, S3, Athena, Cloudfront, DynamoDB), Infrastructure-as-Code (IaC)

Languages: IELTS: 6.5

PROJECTS

ChemiLab – VR Puzzle Game (Solo, MVP) | Unity, Blender, Meta Quest 3

- Developed a solo VR escape-room puzzle game set in a chemistry lab where players combine element blocks to solve puzzles and progress through rooms.
- Built gameplay systems, level flow, 3D models (Blender), and SFX (ElevenLabs) independently in Unity.
- Optimized 3D assets for standalone VR using a low-poly workflow with baked/textured surfaces to keep performance stable without sacrificing visual quality.
- Identified and fixed VFX performance bottlenecks in VR by reducing particle density and particle lifetime after overusing effects during development.
- **Link: https://lgk205.itch.io/chemilab**

Raider Of Horizon – 1–4 Player Co-op Extraction Game (MVP) | Unity, Blender, Terrain Tools

- Co-developed a high-stakes co-op extraction game where teams pilot a shared expedition vehicle, scavenge relics in hostile zones, and extract to the Hub before losing all loot.
- Owned map design and environment/graphic design: built playable expedition zones with Unity Terrain Tools and Blender; shaped exploration flow, combat spaces, and visual direction for the extraction loop.
- Shipped downloadable MVP on itch.io with defined PC system requirements and co-op expedition gameplay (vehicle combat, boss encounters, Hub progression).

PatchBrief – Game Balance Decision Tool | C#, ASP.NET Core, React, TypeScript, LLM

- Led a hackathon team building a decision-support tool that helps game designers evaluate patch impact before release by combining telemetry, game definition, design rules, update plans, and community sentiment.
- Owned Layers 5–7 of an 8-layer deterministic pipeline: L5 Impact & Alignment (C# rule engine detecting who is affected and data vs. community divergence), L6 Risk & Solution Framing (risk types and solution-path templates), L7 structured report generation via LLM with template fallback.

RELEVANT EXPERIENCE

AWS First Cloud Journey (FCJ) Program | Trainee / Participant
Successfully completed the AWS FCJ program, gaining hands-on practical experience with cloud infrastructure, deployment processes, and system configurations.

Lotus Hackathon - (Top 21 Raw Rank / Top 17 AWS Track)
Architected and deployed project infrastructure utilizing various AWS services under a strict 36-hour deadline.
